

INSTRUCTIONS:

1. This examination consists of a total of 9 different pages. The last three pages include a periodic table, some useful mathematical equations, a solubility table and a table of equilibrium constants. All work should be done in this booklet.
2. PRINT your name, TA's name and your lab section number now in the space at the top of this sheet. **DO NOT SEPARATE THESE PAGES.**
3. Answer all questions that you can and whenever called for show your work clearly. Your method of solving problems should pattern the approach used in lecture. You do not have to show your work for the multiple choice or short answer questions.
4. No credit will be awarded if your work is not shown in problems 3, 5, 6b and 7.
5. Point values are shown next to the problem number.
6. Budget your time for each of the questions. Some problems may have a low point value yet be very challenging. If you do not recognize the solution to a question quickly, skip it, and return to the question after completing the easier problems.
7. Look through the exam before beginning; plan your work; then begin.
8. **Relax** and do well.

- (9) 1. Write the chemical formula(s) of the product(s) and balance the following reactions. Identify all products phases as either (g)as, (l)iquid, (s)olid or (aq)ueous. Soluble ionic compounds should be written in the form of their component ions.

- (8) 2. Write the ionic and net ionic chemical equations for 1a) and 1b).

1a)

Ionic equation:

Net Ionic equation:

1b)

Ionic equation:

Net Ionic equation:

- (6) 3. Calculate the magnitude of the equilibrium constant for 1a and 1b.

Short Answer: (4 points each)

(20) 4a. For each of the following acids, write the formula for the conjugate base.

b) For each of the following bases, write the formula for the conjugate acid.

c) Write a chemical equation describing how NaHC_2O_4 behaves as an acid.

d) Write a chemical equation describing how NaHC_2O_4 behaves as a base.

e) Does NaHC_2O_4 behave as an acid or base when added to water? Explain.

(30) 5. Calculate the pH for each of the following solution;

- (9) 6. A 1.50×10^{-3} mol sample of acetylsalicylic acid was dissolved in 12.50 mL of water and then titrated with 0.150 M NaOH. Given that acetylsalicylic acid is a monoprotic acid and using the data from the titration shown in the table below,

Volume of 0.100 M NaOH added (mL)	pH
0.00	2.20
2.50	2.96
5.00	3.44
7.50	3.92
10.00	8.05
12.50	?

Determine;

- (16) 7. Calculate the pH of a solution prepared by adding 0.250 mol of CH_3NH_2 and 0.225 mol of $\text{CH}_3\text{NH}_3\text{NO}_3$ to 1.00 L of water. (Assume no volume change.)

Calculate

a) the initial pH of the solution

b) the pH of the solution after adding 0.0100 mol of HCl to the solution.
