

**INSTRUCTIONS:**

1. This examination consists of a total of 8 different pages. The last 2 pages include important mathematical equations and constants, a solubility table, a periodic table, and a table of dissociation constants. All work should be done in this booklet. You may *carefully* remove the last 2 pages of the examination.
2. PRINT your name, your TA's name and your laboratory section now in the space at the top of this sheet. **DO NOT SEPARATE THE PAGES.**
3. Answer all questions that you can and whenever called for show your work clearly. Your method of solving problems should pattern the approach used in lecture. You do not have to show your work for the multiple choice or short answer questions.
4. *No credit* will be awarded if your work is not shown in problems 2 – 4. Please circle your final answer!
5. Point values are shown next to the problem number.
6. Budget your time for each of the questions. Some problems may have a low point value yet be very challenging. If you do not recognize the solution to a question quickly, skip it, and return to the question after completing the easier problems.
7. Look through the exam before beginning; plan your work; then begin.
8. **Relax** and do well.
